

"Locations of future pump stations, major interceptors, and trunk sewers are being provided for general information only and will not a serve as the basis for any future consistency determinations or permit reviews unless the pump station, major interceptor or trunk sewer is part of a State or felectably funded project.

"Pursuant to N.J.A.C. 7.15, Reparian zones are: 300 feet from top of bank (or centerine of a first order stream where no bank is appurent) for waters designated as Category One and all upstream ributaries within the same HLC 14, 150 feet for waters designated Trout along the length of the regulated water. 150 feet for majers agreement of water flowing flowing house in the state of the regulated water. 150 feet for majers agreement of water flowing flowing house in the intervention of the state of the state

Surface varies that are designated Category One are labed in the Surface Water Quality Standards at N.J. AC. 7.08. The Department's Surface Water Quality Standards (158 data lape was unknown doctement these waters. The appetable AD for the laft has been applied to these vaterways and removed from the proposed severe serve areas on the mapping. Leser width butfore have not been graphically removed from the serve service area but are not proposed for severe service. Caroline I have not proposed from the proposed severe service area to the leaser with buffers also but the 500 buffers are the minimum, the lesser buffers are removed during the build-out analysis; Jurisdictional determinations by the Department will be utilized to determine the existent of the server service areas on intividual lates.

Furthermore, compliance with the riparian zone standard has been demonstrated by the adoption of municipal Riparian Corridor Ordinances, which have been updated to be in compliance with the Flood Hazard Control Act Rules (N.J.A.C. 7:13) and Waster Quality Management Rule (N.J.A.C. 7:13), was adopted on 60:10/1974."

"All existing, new, or expanded industrial pretreatment facilities requiring Significant Indirect User (SUI) permits and/or Treatment Works Approvals, and which are located within the specified sewer service area, are deemed to be consistent."

"Pre-existing grant conditions and requirements (from Federal and State grants or loans for sewerage facilities) which provide for restriction of sewers service to environmentally sensitive areas, are unaffected by adoption of this WMP and compliance is required. Please see municipal WMP Chapters for the existence of any applicable environmentally sensitive areas in which Federal 201 grant limitations prohibit the extention of sewer service."

"Individual subsurface sewage disposal systems (ISSIS) for individual residences can only be constructed in depicted sewer service areas if legally enforceable guarantees are provided, before such construction, that use of such systems will be discontinued when the depicted sewer service becomes available. This applies to ISSIS that require certification from the Department under the Really Improvement Sewerage and Facilities Act (NISA SEL1-22) or individual Treatment Works Approval or New Jersey Pollutant Discharge Elmmation System Permits (under NIAC 7.14A). It also appletes OSSIS which require only local approvals."

Two-deprimer in zeras mapped as worlands, flood prose zeras, mitable labelat for endangered and threatened opcies as identified to the Department's Landscape Mapped Habeta for for indiagneed. The transceller and the Periority Wildife as Rank 3d. and 5d. Natural Heritage Phriority Sites, riparian zones, steep slopes, or designated river areas may be subject to special regulation under Federal or State statutes or rules, and interested persons should decieve with the Department for the latest information. Depiction of environmental features shall be for general

"Areas located within the watershed of a Freshwater One (FW1) stream, as class fied in the Surface Water Quality Sandards, and/or Lass 1-A ground water (Ground Water of Special Ecological Significance), as classified in the Ground Water Quality Sandards, are identified as "Non-degulation water area based on the Surface Water Quality Sandards at N.J. Az. T. 2ft, and or the Ground Water Quality Sandards, and Compared to the Compared Sandards and Sandards and

"For facilities (including but not limited to swer connections, swer extensions and on-site treatment plants) which are located in the Pirelands Area, as defined at NLSA. All: 31:84.11, the approach of the Pinelands Commission pursuant to the requirements of the Pinelands Comprehensive management Plus (CMP) is required prior to construction. All facilities and activities included within this WMP should be consistent with the requirements of the CMP."

"Proposed developments bring into existing and proposed sever service neas which require costail permits must demonstrate compliance with all applicable sections of the Costad Zone Management rules in testing but not limited to Nethanis (N.J.A.C. 7718-3.2). Walunds Biffers (N.J.A.C. 7718-3.3), Secondary Impacts (N.J.A.C. 7718-5.3), Public Facility Use Policies (N.J.A.C. 7718-7.6). Water Quilley (N.J.A.C. 7718-3.3), Secondary Impacts (N.J.A.C. 7718-5.3), Public Facility Use Policies (N.J.A.C. 7718-7.6). Water Quilley (N.J.A.C. 7718-6.3) and the policies under General Land Azons into, Sichelapters, 5.5, And Gilley (N.J.A.C. 7718-6.3).
